What Contractors Should Know About the Artificial Turf Market

Landscape, hardscape, and outdoor living contractors hear the same customer complaints for years before anyone connects them to a turf application: the dog destroyed the yard, the grass will not grow in that corner, the pool deck looks unfinished, or the outdoor space needs a cleaner, more usable finish. Artificial turf can address each of those situations when the application, product, base, and drainage are planned correctly.

This page covers where that demand is coming from, what customers are actually asking for, the real objections contractors raise before adding turf to their services, and what the category can mean for a contractor's business, based on industry data rather than a sales pitch.

- A practical resource for contractors evaluating where artificial turf fits into existing services, customer problems, and project opportunities.

The Turf Category Has Become a Major Market Opportunity

Several trends are feeding artificial turf demand at once: low-maintenance outdoor space, water-conscious landscaping, heavier yard use, pet-friendly surfaces, outdoor living upgrades, and commercial properties that need consistent curb appeal year-round.

Not every customer needs turf. But the data shows turf increasingly solving a real problem in spaces where natural grass struggles, where customers want less upkeep, or where a property needs a cleaner finished look.

Global Market

Stat: \$7.27B

Estimated global artificial turf market value in 2025.

Source: [Grand View Research](#)

Projected Growth

Stat: \$13.67B

Projected global market value by 2033.

Source: [Grand View Research](#)

Growth Rate

Stat: 8.3%

Projected global CAGR from 2026 to 2033.

Water Savings

Stat: 26K

Unit: gal/household/year

Estimated annual outdoor water use per U.S. household, largely tied to landscape irrigation.

Source: [EPA WaterSense](#)

What this means for contractors

Turf demand is not tied to one customer type or one project. It shows up across outdoor living, pet, play, golf, commercial, rooftop, and low-maintenance conversations, which means more than one way it can appear in work contractors already quote.

Source note: Grand View Research and EPA WaterSense. EPA WaterSense reports nearly 9 billion gallons per day in U.S. residential outdoor water use, primarily for landscape irrigation. Per-household estimate is calculated using U.S. household counts and is included as broader irrigation and water-saving context, not as a direct artificial turf savings claim.

Real Talk: The Questions Contractors Actually Have

Most contractors don't need convincing that turf demand exists. What holds them back is a handful of specific, reasonable doubts. Here they are, straight, no spin.

“Isn't turf a commodity now that big-box retailers sell DIY kits?”

Box-store turf and DIY kits are real and aren't going away. But that's actually the case for professional installation, not against it. Big-box installs often go through third-party crews with no track record on the specific job, which is a common source of the seam failures, drainage problems, and premature wear that give the category a bad name. A contractor who gets the base, drainage, and product selection right is offering something a DIY kit structurally can't.

“Won't turf make my work look cheap next to real landscaping?”

Only if it's installed like a shortcut. Turf installed with the same base prep, drainage planning, and finish work as a hardscape or planting project reads as a premium feature, not a cheap fix. The projects that make turf look bad are the ones where nobody thought about drainage, seams, or product fit before rolling it out.

“What's the liability if an install fails?”

This is the right question to ask before adding any new service. Most turf failures trace back to a short list of causes: skipped or inadequate base prep, wrong product for the application, or poor drainage planning. All three are avoidable with the right product knowledge going in.

“Is learning a new category worth the time?”

Depends on the market and existing customer base. Contractors already fielding the complaints turf solves, including mud, pet wear, high-maintenance lawns, and poolside finishing, aren't really learning a new category. They're adding a solution to problems they already hear about. Contractors who start with one focused application, like pet areas or small backyard lawns, tend to find it's a manageable addition rather than a business overhaul.

Ready to connect the objections to real project types?

See where turf tends to fit inside the applications contractors already quote.

What the Category Can Mean for Project Value

Beyond market-size statistics, contractors need to understand how turf can fit into real project conversations, added scope, and application-specific recommendations.

These figures are industry ranges, not a promise for any individual business. Actual ticket size, margin, labor requirements, and profitability depend on market, site conditions, product selection, pricing strategy, and installation execution.

Project Value

Turf projects can represent meaningful installed project value, with final pricing shaped by dealer, market, product, site conditions, and application complexity.

Added Scope

Turf can turn common customer requests into additional project scope instead of a separate referral or missed opportunity.

System Options

Application-specific details can support tiered recommendations, from basic lawn replacements to pet, play, golf, and commercial systems.

Project value often comes from the full system

The business opportunity is not just the turf surface. It is the ability to recommend the right system for the application, site conditions, and customer need.

The Opportunity Connects to Markets Contractors Already Know

The turf opportunity gets stronger next to the landscaping, outdoor living, and pet-care markets contractors already work in. These aren't abstract trends. They're the same conversations already happening with homeowners and property owners.

Landscape Services

Stat: \$188.8B

Estimated U.S. landscape services market size in 2025, across 692,777 landscaping service businesses.

Source: [NALP / IBISWorld](#)

Pet-Friendly Yards

Stat: 65M+

Unit: dog-owning households

U.S. households with dogs, creating demand for cleaner, more durable outdoor spaces.

Source: [APPA National Pet Owners Survey](#)

Pet-Friendly Demand

Stat: 56.3M

U.S. households that own a dog, according to AVMA. Pet areas are a recurring turf opportunity where mud, wear, drainage, and cleanability matter.

Source: [AVMA](#)

Contractor takeaway

Turf tends to work best introduced inside a broader conversation, not pitched as its own category. Landscaping, outdoor living, pool, pet, and commercial property projects already give customers a reason to improve the space.

Source note: NALP / IBISWorld, NAHB, Eye on Housing, and AVMA.

Why Customers Are Asking About Turf

The demand comes from practical problems contractors are likely already hearing about. Turf becomes relevant when a space needs to be cleaner, easier to maintain, more usable, or more consistent than natural grass can manage in that spot. Each of these demand drivers can show up before a customer ever asks for turf by name.

Low-Maintenance Landscapes

Customers want outdoor space that cuts down on mowing, watering, mud, and routine upkeep.

Outdoor Living Upgrades

Backyards, patios, pool areas, side yards, rooftops, and courtyards are being treated as living space, not just lawn.

Pet and Family Use

Dogs, kids, shade, mud, and heavy traffic make it hard to keep natural grass clean and consistent.

Commercial Appearance

Commercial properties need landscapes and amenity spaces that look consistent and hold up under heavy use.

The Market Is Bigger Than Backyard Lawns

The same project types many contractors already quote are where turf demand keeps showing up: residential, commercial, pet, play, golf, and outdoor living. Each application has different performance needs, which is where product selection, drainage, base prep, infill, and wear patterns matter, rather than treating turf as one product for every job.

Residential Lawns & Outdoor Living

Backyards, side yards, shaded areas, patios, and low-maintenance lawn alternatives where customers want a cleaner, more usable outdoor space.

Pet Areas

Residential dog areas, pet runs, kennels, and pet-focused commercial spaces where drainage, cleanability, and durability matter.

Poolside, Patios & Courtyards

Pool surrounds, patios, rooftops, courtyards, and lounge areas where turf softens hard surfaces and finishes the space.

Putting Greens & Specialty Spaces

Backyard putting greens, hospitality amenities, and specialty areas that turn unused space into a standout feature.

Playgrounds & Recreation

Play spaces, parks, schools, and childcare centers where the surface system, pad, drainage, and installation details matter.

Commercial & Multi-Family Landscapes

Commercial properties, hospitality spaces, multi-family amenities, and office courtyards where consistency and maintenance planning matter.

Turf Fits Into the Work Contractors Already Sell

The strongest opportunity isn't forcing turf into every job. It's recognizing where turf solves a real problem inside landscape, hardscape, pool, pet, and commercial work already underway.

Landscape Contractors

Turf fits where grass struggles, maintenance is a concern, or customers want a more usable yard.

Hardscape & Outdoor Living

Turf softens patios, walkways, pool surrounds, rooftops, and entertainment spaces.

Pool Builders

Turf creates cleaner transitions around pool decks, lounge areas, side yards, and backyard features.

Design/Build Firms

Turf fits into larger outdoor living plans where it helps complete the function, finish, and sales story.

Pet-Focused Projects

Turf solves mud, wear, cleanability, and drainage in residential and commercial pet areas.

Commercial, Play & Recreation

Turf supports properties, playgrounds, putting greens, fitness spaces, and recreation areas where consistency matters.

Customer Requests That Signal a Turf Opportunity

Turf projects usually start with a customer complaint, not a customer asking for turf by name. These are the phrases that typically mean turf belongs in the conversation.

- "My dog is destroying the yard."
- "The grass won't grow here."
- "We want less lawn maintenance."
- "The backyard is always muddy."
- "We want a cleaner pool area."
- "The lawn always looks worn out."
- "We want a putting green."
- "The rooftop needs a finished surface."
- "The playground needs a better surface."
- "We want the space usable year-round."

- “The common area always looks worn out.”
- “We need a low-upkeep amenity space.”

Two Different Opportunities, One Expanding Category

Residential and commercial buyers want turf for different reasons, and treating them the same weakens any pitch built around it. Contractors who understand the difference can avoid using the same turf story for every project.

Residential Opportunity

- Backyards and side yards
- Pet areas
- Pool areas and patios
- Putting greens
- Play spaces and shaded areas
- Outdoor living upgrades

Commercial Opportunity

- Multi-family properties
- Hotels and hospitality
- Office courtyards
- Rooftop amenity spaces
- Playgrounds and recreation
- Pet facilities and municipal landscapes

How the conversation changes

- **Residential buyers want:** Cleaner daily use, pet- and kid-friendly space, less routine lawn work, and a backyard lifestyle upgrade.
- **Commercial buyers want:** Consistent appearance, maintenance planning, durability in high-use areas, and stronger amenity value.

Contractors Who Win Understand More Than the Surface

The surface is what customers see. The system underneath determines how it performs. Understanding that difference is what separates a better-planned installation from one that turns into a callback.

Base Preparation

A stable, properly prepared base supports long-term appearance and usability.

Drainage Planning

Especially important in pet areas, rooftops, playgrounds, pool areas, and other high-use spaces.

Turf Selection

A pet area, putting green, playground, and commercial courtyard can each call for different product characteristics.

Backing and Fiber

Backing, fiber profile, pile height, and construction all affect how the surface looks and performs.

Infill Choice

The right infill supports stability, appearance, comfort, and application-specific performance.

Seams and Edges

Professional seam work, edging, and finishing details are what make a project feel polished.

What It Takes to Sell Turf Well

Turf can be a strong service opportunity, but the best results come from understanding more than the surface. Before adding turf to a project or offering it as a new service, connecting the customer's problem to the right application, product, and installation approach is what separates a good outcome from a callback.

Product Knowledge

Different projects call for different turf characteristics. A pet area, putting green, playground, pool surround, and commercial courtyard should not all be treated the same.

Application Fit

The strongest opportunities start with a clear customer need: mud, shade, pet wear, high traffic, poolside finishing, or low-maintenance outdoor living.

Installation System Knowledge

Base prep, drainage, infill, seams, edging, and finishing details all affect how the space looks and performs.

Customer Education

Trust comes from explaining what turf can do, what it cannot do, and why product selection matters.

Supplier Evaluation

A good turf supplier helps evaluate product options and talk through project needs before the sale, not just fill an order after the fact.

Focused Starting Points

Many contractors start with a focused project, such as pet areas, side yards, pool surrounds, small lawns, or putting greens, before expanding into more specialized work.

Know how to start without trying to sell every application at once.

Explore the product guidance and supplier resources that help contractors evaluate turf projects more confidently.

Questions Contractors Ask About the Artificial Turf Opportunity

Real Talk covers the commodity, appearance, and liability objections in depth. The questions below cover the next layer of contractor questions.

Is artificial turf a good business opportunity for contractors?

It can be a strong one when it fits a contractor's services, market, and customer base. It works best when there's a clear understanding of the right applications, installation requirements, product differences, and the customer problems it solves.

What's driving artificial turf demand?

Low-maintenance landscaping, water-conscious design, pet-friendly yards, outdoor living upgrades, putting greens, commercial amenity spaces, rooftops, courtyards, playgrounds, and properties where natural grass is hard to maintain.

What types of contractors can add artificial turf?

Landscape contractors, hardscape contractors, outdoor living companies, pool builders, commercial landscape contractors, playground contractors, turf installers, and design/build firms, when it fits their services and market.

How can contractors add artificial turf to a landscaping business?

Many contractors start by adding turf to project types they already quote, such as side yards, pet areas, pool surrounds, small lawns, or putting greens. Starting with focused applications helps contractors learn product selection, base preparation, drainage, infill, seams, and finishing details before expanding into more specialized work.

What applications are easiest for contractors to start with?

Many contractors begin with focused projects: pet areas, side yards, small backyard lawns, pool surrounds, or putting greens. These usually start with a clear customer problem like mud, shade, lawn wear, or a desire for a more usable space.

Do contractors need turf installation experience to start offering it?

No. There's no need to start with every application at once. Learning base prep, drainage, infill, seams, and finishing details on a focused project first is how most contractors build confidence.

How does turf fit with hardscape and pool projects?

It complements patios, pool decks, walkways, courtyards, and lounge areas by adding a softer finished surface. For hardscape and pool contractors, turf often becomes a natural add-on when a project needs a clean, usable landscape element.

How can contractors avoid competing only on price?

By explaining the full system: product selection, base prep, drainage, infill, seams, edging, and application fit. Once customers understand what affects performance, the conversation moves from cheapest surface to best solution.

What should contractors look for in an artificial turf supplier?

Product options that match different applications, clear guidance on product selection, reliable availability, technical support, samples, and installation resources.

How should contractors avoid overpromising to their own customers?

By skipping claims like maintenance-free, never gets hot, or lasts forever, and using language like low-maintenance, application-specific, and when properly installed instead. Water savings should only be mentioned in the context of grass-to-water-smart landscape conversion programs.

Where to Go From Here

This page is published by FieldTurf Landscape as an industry resource for contractors evaluating artificial turf. If the opportunity raises questions about your business, applications, product fit, or what to expect from a first turf project, a direct conversation can help clarify the next step.

FieldTurf Landscape can help contractors compare turf options by application, understand product fit, and think through project considerations before the first quote.
